

Riviera Cruise – Islands Prvić and Zlarin

Departure by boat from Solaris, from the pier in front of the NIKO hotel.

Island Prvić – known by peace, silence, mediteranian colors and a beautiful coast suitable for swimming. Famous inventor Faust Vrančić was born there. There are no cars on the island, so the silence is a new experience for guests coming from the urban environment.

There you will truly find the Mediterranean as it once was.

The name Prvić, according to some interpretations, comes from Prvina, the spring God of old Croats.

At Faust Vrančić Memorial Center, you can learn about the life and work of Faust Vrančić, inventor of Homo Volan - flying man, and a lot more ...

Take a look at the collection of models of his invention, some of which are of a real size, and his most significant written works. Educational games for the youngest are also on the multimedia display.

Island Zlarin - known by the corals, which is not a strange thing, since the activity of processing and hunting on corals has been present since the 15th century. Who wants to see how it is made, and buy jewelry made of red or white corals, will be able to do it on Zlarin. The island is also known for its beautiful beaches that are mostly pebbly or gravel and sandy.
